

## SDS Max - Single Tip & Cross Head

**evo4max**

- Manufactured in Sheffield, England
- Four cutter head design
- 'X' crosshead tip layout
- Proven double flute design
- Deep clearways.
- Symmetrical head / body combination
- Purpose designed
- Co-planer faceting

### 1. DEEP CLEARWAYS

Deep clearways enable immediate spoil removal from the drill head area, aided by the angled facets into the double flutes and avoids trapped debris.

Clearways account for 38% of drill head area.

### 2. CO-PLANER FACETING

Co-planer faceting rake angle of the tip is matched by the precision facet to enable uninterrupted spoil flow into the deep clearways.

### 3. NEW IMPROVED SIDE TIPS

Size of purpose designed carbide side tips have been increased to enable smoother and more effective drilling action.

Now side tips are not just 'wear' parts but are integral to assisting cutting action, now on four fronts.

### 4. FLUTE GEOMETRY

Proven double flute design that complements the deep clearways on the crosshead design, giving balanced, smoother drilling action. Truer, rounder holes are produced, ideal for precise technical fixing applications.
