

For tightening taps without isolating the water supply*

Jaw dropper

“Jaw Dropping” Action

PATENT PENDING

*Designed for 1/2" and 3/4" BSP threads - Suitability with every manufacturer's nut size can not be guaranteed

MAXIMUM LEVERAGE

MAXIMUM ACCESS

1. Sliding jaw locked in position to allow tightening/removal of pipe union nut
2. Sliding jaw dropped to allow tightening of tap back nut with out having to turn off water supply or drain system

- Slim design ensures maximum accessibility
- Adjustable handles give maximum leverage as well as enabling use of jaws at either end of wrench
- The sliding handle channel means the handle can be easily repositioned
- Flat head screwdriver fitting on reverse of jaws allow for quick and easy adjustment of the jaws
- Different jaws at either end of the wrench cover a wide range of nut sizes
- In the closed position the bottom half of the jaw acts as a stop when tightening/removing union nut
